Cumulative acres showing in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Northeasterly offshore winds of 15-25 mph gusting to 40 mph will continue across southern California amid very low afternoon relative humidity of 2-10% and poor overnight recovery. Very dry conditions will continue across much of the Southwest, as well, while strong inversions continue in the northern Intermountain West. A weak frontal system will bring light snow to the central and northern Plains into the Midwest, while a winter storm exits the Southeast coast. Very cold temperatures are expected across the Mid-Atlantic and Northeast, with dangerously cold wind chills in the Northeast. Light to moderate snow will continue in much of western Alaska while mixed rain and snow spreads east long the south coast. A cold front will move through Hawai'i today bringing widespread showers along with locally breezy southwest winds.
